

BE SURE THAT AUTOMATIC PAGE SCALING  
IS **NOT** SELECTED WHEN YOU PRINT!!  
THAT WILL GIVE YOU AN INACCURATE  
MEASUREMENT!

If the paper does not fold in half on the dotted line then it  
was printed incorrectly

Almost all Acoustic Guitars are either  $1\frac{3}{4}$ " or  $1\frac{11}{16}$ " width at the nut\*. The Voice Capo will fit ALL of these guitars. Voice will also fit most Electric Guitars as well. Voice's may also fit guitars slightly wider or skinnier depending on the string spacing, but it is not guaranteed. If you are unsure as to whether Voice will fit your guitar, use the image guide above to measure the width of your guitar nut. Fold this paper in half and hold the image directly below the nut. If it is the same size, or anywhere in the green, you are good to go!

The Voice Capo will not fit Nylon String Classical Guitars.

\*The nut is a strip, between the fret board and headstock, on which the guitar strings sit. The nut has small notches which are used as guitar string guides
